

Using Tradco Dimmers with LED Lights

The following information only relates to Tradco dimmer mechanisms with the '/250' suffix after the product code. Our standard dimmer mechanisms are not compatible with LED lights.

Our LED dimmer mechanisms are manufactured in Australia by HPM and therefore meet all Australian standards and are of the highest quality available to us.

Accordingly, our dimmer mechanisms will function with quality LED lights that have been designed to be used with a dimmer. Generally, if your LED light is manufactured by a reputable lighting company, then our dimmers should function correctly.

However, while our dimmers are compatible with the majority of quality LED light brands, we cannot guarantee that they will function with cheaper, imported LED lights.

Before ordering any of our LED dimmers, it is important to check whether the LED light in question is compatible with a HPM 250TMWE series dimmer mechanism. This information should be available from the place of purchase or from the light manufacturer's website.

Tradco Hardware Pty Ltd will not accept responsibility for any dimmers that have been purchased where the data specifications for the LED light are not available or the manufacturer has advised that it is not suitable for use with a dimmer.
